▶ paraglidingfree

Paraglider pilots have become increasingly passionate about the many facets of flight on offer and demand a wing suitable for each: thermalling or dynamic flight, big distance or just chilling in the valley release at the end of the day.

To meet this demand for a versatile wing, we designed the AERODYNE FREE, a freestyle wing with a wide range of applications.

The FREE is ultra-flexible, safe and efficient, and benefits from the design of the SHOOT, our special acro wing. The result: AERODYNE offers a class-beating wing that is willing and able to satisfy all tastes - even the most extreme.

This wing will allow you to not only log kilometers flown on your favourite XC site, but also to perform some freestyle maneuvers. It will be particularly appreciated by pilots wanting to master freestyle maneuvers, as the FREE offers an excellent climb rate in thermals. This allows you to perform some mindblowing maneuvers before thermalling up for more !
